Human Guinea Pigs, by Kenneth Mellanby: A Reprint with Commentaries

Springer Nature This book reprints Human Guinea Pigs, by Kenneth Mellanby, a seminal work in the history of medical ethics and human subject research that has been nearly unavailable for over 40 years. Detailing the use of World War II conscientious objectors

who volunteered for experimentation on scabies transmission, Mellanby's book offers insight into one approach to human subject experimentation before the development of ethical oversight regulations. His work was initially published prior to the articulation of the Nuremberg Code, which makes his subsequent position as a reporter for the British Medical Journal at the Nuremberg Trials very interesting, particularly given his sometimes controversial opinions on Nazi medical experimentation. This book reprints the second edition together with commentary essays that situate Mellanby's ethical approach in historical context and relative to contemporary approaches. This volume is of particular interest to scholars of the history of human subject research.

The Green Function Method in Statistical Mechanics

Courier Dover Publications Concise monograph devoted to techniques of solving many-body problems in physics using the quantum-mechanical Green function method. Requires some familiarity with the basic theory of quantum mechanics and statistical mechanics. 1962 edition.

An Introduction to Mathematics

Courier Dover Publications Concise volume for general students by prominent philosopher and mathematician explains what math is and does, and how mathematicians do it. "Lucid and cogent ... should delight you." — *The New York Times*. 1911 edition.

Cohomology and Differential Forms

Courier Dover Publications This monograph explores the cohomological theory of manifolds with various sheaves and its application to differential geometry. Based on lectures given by author Izu Vaisman at Romania's University of Iasi, the treatment is suitable for advanced undergraduates and graduate students of mathematics as well as mathematical researchers in differential geometry, global analysis, and topology. A self-contained development of cohomological theory constitutes the central part of the book. Topics include categories and functors, the Čech cohomology with coefficients in sheaves, the theory of fiber bundles, and differentiable, foliated, and complex analytic manifolds. The final chapter covers the theorems of de Rham and Dolbeault-Serre and examines the theorem of Allendoerfer and Eells, with applications of these theorems to characteristic classes and the general theory of harmonic forms.

A History of Mathematical Notations

Courier Corporation This classic study notes the first appearance of a mathematical symbol and its origin, the competition it encountered, its spread among writers in different countries, its rise to popularity, and its eventual decline or ultimate survival. Originally published in 1929 in a two-volume edition, this monumental work is presented here in a single volume.

Spins in Chemistry

Courier Corporation Originally delivered as a series of lectures, this volume systematically traces the evolution of the "spin" concept from its role in quantum mechanics to its assimilation into the field of chemistry. Author Roy McWeeny presents an in-depth illustration of the deductive methods of quantum theory and their application to spins in chemistry, following the path from the earliest concepts to the sophisticated physical methods employed in the investigation of molecular structure and properties. Starting with the origin and development of the spin concept, the text advances to an examination of spin and valence; reviews a simple example of the origin of spin Hamiltonians; and explores spin density, spin populations, and spin correlation. Additional topics include nuclear hyperfine effects and electron spin-spin coupling, the g tensor, and chemical shifts and nuclear spin-spin coupling.

An Introduction to the Theory of Elasticity

Courier Corporation Accessible text covers deformation and stress, derivation of equations of finite elasticity, and formulation of infinitesimal elasticity with application to two- and three-dimensional static problems and elastic waves. 1980 edition.

Quantum Theory

Courier Corporation This advanced undergraduate-level text presents the quantum theory in terms of qualitative and imaginative concepts, followed by specific applications worked out in mathematical detail.

Thermodynamics of Small Systems, Parts I & II

Courier Corporation Authoritative summary introduces basics, explores environmental variables, examines binding on macromolecules and aggregation, and includes brief summaries of electric and magnetic fields, spherical drops and bubbles, and polydisperse systems. 1963 and 1964 editions.

The Department of State Bulletin, Vol. 68

January 1, 1973 (Classic Reprint)

Forgotten Books Excerpt from The Department of State Bulletin, Vol. 68: January 1, 1973 Secretary Rogers: I'd just like to say by way of preface that I think the meeting was a very successful one, and I was particularly pleased at the general climate of the meeting. I think that was demonstrated most for all of you ladies and gentlemen by the fact that the meeting broke up at which is quite unusual in itself. And although you might, I suppose, have expected problems to surface which would bring into play some contention, that wasn't the case. I think it was a very successful meeting. The Transuranium Elements

Springer Science & Business Media Nearly three years have passed since the publication of the original Russian edition, in which time there have appeared various papers on recent research on the transuranium elements, of which the most notable concern the production of element 105 at Dubna and Berkeley. There has also been much fresh information on elements 104 (kurchatovium) and 103 (lawrencium). Our knowledge of shell effects in the fission barrier has been extended. Hopes of finding relatively stable superheavy elements have stimulated searches for such elements in nature as well as rapid development in heavy ion acceleration. We may see some very considerable discoveries in the next few years. The new results vary in reliability, and so it is not surprising that some papers on the properties of the heaviest elements have given rise to vigorous debates, whose value lies in the way they advance the subject. We have not attempted to give an exhaustive survey of recent papers and have merely added brief sections to

reflect what we consider to be the most important points from these. So far, the United States and the USSR have made the most considerable contributions to the synthesis, study, and use of the transuranium elements, so it is especially welcome to us that this book, first published in our country, should now appear in the USA in an English translation.

The Reprint Bulletin

Selected Water Resources Abstracts, Vol. 6

September 1, 1973 (Classic Reprint)

Forgotten Books Excerpt from Selected Water Resources Abstracts, Vol. 6: September 1, 1973 Selected Water Resources Abstracts is designed to serve the scientific and technical information needs of scientists, engineers, and managers as one of several planned services of the Water Resources Scientific Information Center (wrsic). The Center was established by the Secretary of the Interior and has been designated by the Federal Council for Science and Technology to serve the water resources community by improving the communication of water-related research results. The Center is pursuing this objective by coordinating and supplementing the existing scientific and technical information activities associated with active research and investigation program in water resources. To provide wrsic with input, selected organizations with active water resources research programs are supported as centers of competence responsible for selecting, abstracting, and indexing from the current and earlier pertinent literature in specified subject areas. Additional centers of competence have been established in cooperation with. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Virginians at War

The Civil War Experiences of Seven Young Confederates

Rowman & Littlefield Virginians at War is the tale of seven Virginians who strongly supported the Confederacy from beginning to end. Their stories illustrate how devotion to the "cause" of independence, religious faith, family and community commitment to the struggle, and shared sacrifices tied these people to the flagging fortunes of the Confederacy. Included here are stories of both men and women, on the battlefield and on the homefront. John G. Selby describes in vivid prose their seven intriguing lives based on their diary entries, letters, and memoirs. Through the lives of these men and women, readers will come to understand what the war meant to those who fought and survived it. About the Author Dr. John G. Selby is the recipient of numerous awards and honors for his work in American and world history. In his twenty-two year career, he has taught on modern America, the Civil War, the Vietnam War, modern Middle East, and world history. He is currently professor of history at Roanoke College in Salem, Virginia.

From Political Economy to Economics

Method, the social and the historical in the evolution of economic theory

Routledge Economics has become a monolithic science, variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme. So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection. The authors show how economics was once rich, diverse, multidimensional and pluralistic, and unravel the processes that lead to orthodoxy's current predicament. The book details how political economy became economics through the desocialisation and the dehistoricisation of the

dismal science, accompanied by the separation of economics from the other social sciences, especially economic history and sociology. It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists, historians and other social scientists. This has resulted in an impoverished historical and social content within mainstream economics. The book ranges over the shifting role of the historical and the social in economic theory, the shifting boundaries between the economic and the non-economic, all within a methodological context. Schools of thought and individuals, that have been neglected or marginalised, are treated in full, including classical political economy and Marx, the German and British historical schools, American institutionalism, Weber and Schumpeter and their programme of Socialökonomik, and the Austrian school. At the same time, developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised, and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore. The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda. This is done by treating economics as a social science once again, rather than as a positive science, as has been the inclination since the time of Jevons and Walras. It involves transcending the boundaries of the social sciences, but in a particular way that is in exactly the opposite direction now being taken by "economics imperialism". Drawing on the rich traditions of the past, the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future.

Books in Print Supplement

Includes authors, titles, subjects.

An Introduction to Theories of Personality

7th Edition

Psychology Press This 7th Edition helps students unravel the mysteries of human behavior through its highly readable introduction to the ideas of the most significant personality theorists. Engaging biographical sketches begin each chapter, and unique capsule summaries help students review key concepts. Theories come alive through the inclusion of quotations from the theorists' writings and numerous applications such as dream interpretation, psychopathology, and psychotherapy. Significant changes in the 7th edition include an extended discussion of the practical applications of personality theory, with an emphasis on guidelines that can help people increase their self-knowledge, make better decisions, and live more fulfilling lives. Fictionalized but true-to-life examples illustrating

the perils of inadequate self-knowledge include college students, parents, terrorists, business executives, and politicians, while other examples show the positive outcomes that can result from a better understanding of one's unconscious. This 7th edition also includes a more extensive discussion of how a lack of self-understanding caused difficulties for such noted theorists as Freud and Erikson, and a new section that explains how behavior can be strongly influenced by the situation as well as by one's personality. Finally, a new interactive web site provides practice test questions and other topics of interest.

Sport Fishery and Wildlife Research, 1973-74

Activities in the Divisions of Research for the Calendar Year 1973 and the First Half of 1974 (Classic Reprint)

Forgotten Books Excerpt from Sport Fishery and Wildlife Research, 1973-74: Activities in the Divisions of Research for the Calendar Year 1973 and the First Half of 1974 Public awareness of our natural environment and its misuse continues to grow. In the fish and wildlife sector, concern is increasing for endangered species and for nongame wildlife. If wild populations of many forms of fish and wildlife are to be maintained in the face of changing and dwindling habitat resulting from human activity, more must be known about the animals' biology, ecology, and behavior. This is the function of sport fishery and wildlife research. The purpose of this publication is to relate some of the activities and accomplishments of sport fishery and wildlife research in the u.s. Fish and Wildlife Service. The report covers the period of 1 January 1973 through 30 June 1974, and changes the reporting period for this and future annual reports from calendar to fiscal year.
