Crime Scene Processing and Investigation Workbook

CRC Press *The work of a crime scene investigator requires stellar organizational skills and razor-sharp attention to detail. Developing these skills is best achieved through hands-on training simulating actual case events. Crime Scene Processing and Investigation Workbook takes students from the classroom to the field and into the lab to explore a range of scenarios they will likely encounter on the job. Exercises presented in this practical handbook include assessing the scene, crime scene photography and mapping, fingerprint evidence, documentation, impression-casting, bloodstain pattern recognition, and advanced techniques for scene processing. The book also examines the actions of the initial responding officer, highlights special scene considerations, and describes the role of crime scene analysis and reconstruction. Designed to complement Gardner's Practical Crime Scene Processing and Investigation, this manual uses a consistent format throughout to ensure assimilation. Each chapter begins with a list of key terms and provides learning outcomes that describe the goal of the chapter. Tasks are then broken down into specific segments, with objectives, necessary materials, and a concept overview provided to promote heightened focus on salient points in the chapter. Post-lab questions enable students to test their grasp of the material and sample worksheets are provided that can be duplicated and used in actual case scenarios. By practicing the techniques described in this manual, students will be ready when they encounter them for the first time on the job.*

Teaching Undergraduates

Routledge *This practical guide is designed to help college teachers plan their undergraduate courses and deliver high-quality instruction. The book's theme is that teaching is a creative, decision-making, idea-testing enterprise whose purpose is to facilitate student learning in all of its facets. Its goal is to help instructors understand the multiple kinds of learning taking place in their courses so that they can select, devise, evaluate, and modify teaching techniques to improve their effectiveness. Based on research on human learning, memory, thinking, and problem solving, as well as studies of teaching and less-formal reports of teaching practices, the book offers concrete advice about all aspects of college teaching. *Part I is devoted to course planning. It outlines the many decisions instructors face in defining a course as their own and discusses the larger issues that shape a course and constrain some specific choices. Selecting course content, choosing learning goals, deciding how to pace a course, and scheduling tests are some of these issues. A workable timetable for preparing a course is included. *Part II is a mini-course on human learning, memory, and thinking. It provides the conceptual foundation for making teaching decisions, for selecting instructional strategies, and especially for inventing new techniques that might particularly fit a specific course. *Part III deals with the "nitty-gritty" of college teaching, including how to choose a textbook; lecturing and conducting classroom discussions; types and purposes of writing assignments, and how to structure and evaluate them; dealing with plagiarism; strengths and weaknesses of different types of tests, the relation of tests to learning goals, and guidelines for constructing good tests; and grading systems. *Part IV addresses professional and ethical issues of importance and consequence to instructors. New college instructors, more experienced faculty who would like to reflect on their teaching practices and consider making some changes, and teaching assistants will all find this book relevant and useful.*

English Learner Students' Readiness for Academic

Success

The Predictive Potential of English Language Proficiency Assessment Scores in Arizona and Nevada. REL 2017-172

When is the right moment to transition an English learner student from part-time participation in English language development classes into full-time participation in mainstream English-only classes? English learner students should be moved into full-time mainstream English-only classes when they are sufficiently fluent in English to be able to continue to grow in English fluency and subject matter content knowledge and reach expected minimums on state content tests, generally within two years of the transition. Currently, transition criteria center on meeting the English language proficiency levels that each state sets for reclassification of English learner students as fluent English proficient at each grade level. However, no studies describe the extent to which such criteria work as intended. In other words, how ready are English learner students to achieve minimum subject matter content knowledge levels in English language arts and math at the English proficiency level for reclassification as fluent English proficient and placement in mainstream English-only classes? This study examined the relationship between the English language proficiency level of English learner students in Arizona and Nevada and the students' subsequent performance on English language arts and math content tests. It followed two cohorts of students over three years, beginning in 2009/10: one cohort in grade 3 (elementary) and one in grade 6 (middle school). This report describes the percentage of English learner students at each proficiency level who passed the English language arts and math content tests in the two years following the English language proficiency assessment (2010/11-2011/12) as well as the probability that an English learner student would subsequently pass the content tests based on his or her English language proficiency assessment scale score. English learner students at higher proficiency levels had higher passing rates on the academic content tests. For example, in Arizona 58 percent of grade 3 students at the intermediate proficiency level (level 4) in 2009/10 passed the English language arts content test at least once in 2010/11 or 2011/12, compared with 96 percent of grade 3 students at the proficient level (level 5). Grade 3 English learner students in Arizona and Nevada could score below the threshold for English language

proficiency in 2009/10 and still have a 50 percent or higher probability of subsequently passing the English language arts and math content tests in 2010/11 or 2011/12. For example, grade 3 English learner students in Nevada could score 25 scale score points below the reclassification threshold and still have a 50 percent or higher probability of passing the English language arts content test in the subsequent two years. But grade 6 English learner students in Arizona and Nevada needed to score above the threshold for reclassification as fluent English proficient. For example, in Nevada, grade 6 English learner students had to score 46 scale score points above the reclassification threshold to have a 50 percent or higher probability of passing the math content test in the subsequent two years. The following are appended: (1) Supporting data tables; (2) Data and methodology; (3) Passing rate probability figures; and (4) Distribution of English language proficiency assessment scale scores.

Building Information Modeling

Framework for Structural Design

CRC Press *BIM for Structural Engineering and Architecture Building Information Modeling: Framework for Structural Design* outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures. *BIM as a Framework Enabler* This book introduces a new framework—the structure and architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts. Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design Places special emphasis on the

application of BIM technology for exploring the intimate relationship between structural engineering and architectural design Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.
