THE CONSTITUTION OF ALGORITHMS

GROUND-TRUTHING, PROGRAMMING, FORMULATING

MIT Press A laboratory study that investigates how algorithms come into existence. Algorithms--often associated with the terms big data, machine learning, or artificial intelligence--underlie the technologies we use every day, and disputes over the consequences, actual

or potential, of new algorithms arise regularly. In this book, Florian Jatton offers a new way to study computerized methods, providing an account of where algorithms come from and how they are constituted, investigating the practical activities by which algorithms are progressively assembled rather than what they may suggest or require once they are assembled.

COLLEGE CHOICES

THE ECONOMICS OF WHERE TO GO, WHEN TO GO, AND HOW TO PAY FOR IT

University of Chicago Press Aspiring college students and their families have many options. A student can attend an in-state or an out-of-state school, a public or private college, a two-year community college program or a four-year university program. Students can attend full-time and have a bachelor of arts degree by the age of twenty-three or mix college and work, progressing toward a degree more slowly. To make matters more complicated, the array of financial aid available is more complex than ever. Students and their families must weigh federal grants, state merit scholarships, college tax credits, and college savings accounts, just to name a few. In College Choices, Caroline Hoxby and a distinguished group of economists show how students and their families really make college decisions—how they respond to financial aid options, how peer relationships figure in the decision-making process, and even whether they need mentoring to get through the admissions process. Students of all sorts are considered—from poor students, who may struggle with applications and whether to continue on to college, to high aptitude students who are offered "free rides" at elite schools. College Choices utilizes the best methods and latest data to analyze the college decision-making process, while explaining how changes in aid and admissions practices inform those decisions as well.

STUDENT FINANCING OF HIGHER EDUCATION

A COMPARATIVE PERSPECTIVE

Routledge The financing of higher education is undergoing great change in many countries around the world. In recent years many countries are moving from a system where the costs of funding higher education are shouldered primarily by taxpayers, through government subsidies, to one where students pay a larger share of the costs. There are a number of factors driving these trends, including: A push for massification of higher education, in the recognition that additional revenue streams are required above and beyond those funds available from governments in order to achieve higher participation rates Macroeconomic factors, which lead to constraints on overall government revenues Political factors, which manifest in demands for funding of over services, thus restricting the funding available for higher (tertiary) education A concern that the returns to higher education accrue primarily to the individual, rather than to society, and thus students should bear more of the burden of paying for it This volume will help to contribute to an understanding of how these trends occur in various countries and regions around the world, and the impact they have on higher education institutions, students, and society as a whole. With contributions for the UK, USA, South Africa and China this vital new book gives a truly global picture of the rapidly changing situation

COMPUTATION AND THE HUMANITIES

TOWARDS AN ORAL HISTORY OF DIGITAL HUMANITIES

Springer This book addresses the application of computing to cultural heritage and the discipline of Digital Humanities that formed around it. Digital Humanities research is transforming how the Human record can be transmitted, shaped, understood, questioned and imagined and it has been ongoing for more than 70 years. However, we have no comprehensive histories of its research trajectory or its disciplinary development. The authors make a first contribution towards remedying this by uncovering, documenting, and analysing a number of the social, intellectual and creative processes that helped to shape this research from the 1950s until the present day. By taking an oral history approach, this book explores questions like, among others, researchers' earliest memories of encountering computers and the factors that subsequently prompted them to use the computer in Humanities research. Computation and the Humanities will be an essential read for cultural and computing historians, digital humanists and those interested in developments like the digitisation of cultural heritage and artefacts. FINANCIAL EDUCATION FOR YOUTH

THE ROLE OF SCHOOLS

The importance of financial literacy and specifically the need to promote financial education has been recognised as an important contributor to improved financial inclusion and individuals' financial well-being as well as a support to financial stability. That same year, Asia-Pacific.

CROSSING THE FINISH LINE

COMPLETING COLLEGE AT AMERICA'S PUBLIC UNIVERSITIES

Princeton University Press Why so many of America's public university students are not graduating—and what to do about it The United States has long been a model for accessible, affordable education, as exemplified by the country's public universities. And yet less than 60 percent of the students entering American universities today are graduating. Why is this happening, and what can be done? Crossing the Finish Line provides the most detailed exploration ever of college completion at America's public universities. This groundbreaking book sheds light on such serious issues as dropout rates linked to race, gender, and socioeconomic status. Probing graduation rates at twenty-one flagship public universities and four statewide systems of public higher education, the authors focus on the progress of students in the entering class of 1999—from entry to graduation, transfer, or withdrawal. They examine the effects of parental education, family income, race and gender, high school grades, test scores, financial aid, and characteristics of universities attended (especially their selectivity). The conclusions are compelling: minority students and students from poor families have markedly lower graduation rates—and take longer to earn degrees—even when other variables are taken into account. Noting the strong performance of transfer students and the effects of financial constraints on student retention, the authors call for improved transfer and financial aid policies, and suggest ways of improving the sorting processes that match students to institutions. An outstanding combination of evidence and analysis, Crossing the Finish Line should be read by everyone who cares about the nation's higher education system.

PRIVATISATION AND COMMERCIALISATION IN PUBLIC EDUCATION

HOW THE PUBLIC NATURE OF SCHOOLING IS CHANGING

Routledge Privatisation and Commercialisation in Public Education asks how publicness is being redefined through the restructuring of nominally public school systems. Over the past few decades, governments have engineered a wave of reforms in their public systems opening them to privatisation and commercialisation. In public education systems competition, choice and autonomy have become entrenched vectors of these reforms. This edited collection carefully examines the difference between privatisation and commercialisation and traces the varying effects privatised and commercialised policy reforms have had in different educational contexts. Many countries have approached the thorny issues of school choice and school autonomy in different ways, and this book investigates the impact of these agendas across the USA, UK, Australia, New Zealand, parts of Europe, sub-Saharan Africa and India. This book brings together contemporary, international perspectives from high-profile policy academics on both privatisation and commercialisation in public education systems under the provocation of how the 'public' nature of schooling is changing. This is essential reading for those interested in the idea that current education policy reforms are reshaping what might be considered core educational practices in public schooling.

UNDERSTANDING THE WORKING COLLEGE STUDENT

NEW RESEARCH AND ITS IMPLICATIONS FOR POLICY AND PRACTICE

Stylus Publishing, LLC. How appropriate for today and for the future are the policies and practices of higher education that largely assume a norm of traditional-age students with minimal on-campus, or no, work commitments? Despite the fact that work is a fundamental

part of life for nearly half of all undergraduate students - with a substantial number of "traditional" dependent undergraduates in employment, and working independent undergraduates averaging 34.5 hours per week - little attention has been given to how working influences the integration and engagement experiences of students who work, especially those who work full-time, or how the benefits and costs of working differ between traditional age-students and adult students. The high, and increasing, prevalence and intensity of working among both dependent and independent students raises a number of important questions for public policymakers, college administrators, faculty, academic advisors, student services and financial aid staff, and institutional and educational researchers, including: Why do so many college students work so many hours? What are the characteristics of undergraduates who work? What are the implications of working for students' educational experiences and outcomes? And, how can public and institutional policymakers promote the educational success of undergraduate students who work? This book offers the most complete and comprehensive conceptualization of the "working college student" available. It provides a multi-faceted picture of the characteristics, experiences, and challenges of working college students and a more complete understanding of the heterogeneity underlying the label "undergraduates who work" and the implications of working for undergraduate students' educational experiences and outcomes. The volume stresses the importance of recognizing the value and contribution of adult learners to higher education, and takes issue with the appropriateness of the term "non-traditional" itself, both because of the prevalence of this group, and because it allows higher education institutions to avoid considering changes that will meet the needs of this population, including changes in course offerings, course scheduling, financial aid, and pedagogy.

39 WAYS TO SAVE THE PLANET

Random House We got ourselves into this. Here's how we can get ourselves out. We know the problem: the amount of biodiversity loss, the scale of waste and pollution, the amount of greenhouse gas we pump into the air... it's unsustainable. We have to do something. And we are resourceful, adaptable and smart. We have already devised many ways to reduce climate change - some now proven, others encouraging and craving uptake. Each one is a solution to get behind. In 39 Ways to Save the Planet, Tom Heap reveals some of the real-world solutions to climate change that are happening around the world, right now. From tiny rice seeds and fossil fuel free steel to grazing elk and carbon-capturing seagrass meadows, each chapter reveals the energy and optimism in those tackling the fundamental problem of our age. Accompanying a major BBC Radio 4 series in collaboration with the Royal Geographical Society, 39 Ways to Save the Planet is a fascinating exploration of our attempt to build a better future, one solution at a time. A roadmap to global action on climate change, it will encourage you to add your own solutions to the list.

BELL'S THEOREM, QUANTUM THEORY AND CONCEPTIONS OF THE UNIVERSE

Springer Bell's Theorem and its associated implications for the nature of the physical world remain topics of great interest. For this reason many meetings have been recently held on the interpretation of quantum theory and the implications of Bell's Theorem. Generally these meetings have been held primarily for quantum physicists and philosophers of science who have been or are actively working on the topic. Nevertheless, other philosophers of science, mathematicians, engineers as well as members of the general public have increasingly taken interest in Bell's Theorem and its implications. The Fall Workshop held at George Mason University on October 21 and 22, 1988 and titled "Bell's Theorem, Quantum Theory and Conceptions of the Universe" was of a more general scope. Not only it attracted experts in the field, it also covered other topics such as the implications of quantum non-locality for the nature of consciousness, cosmology, the anthropic principle, etc. topics usually not covered in previous meetings of this kind. The meeting was attended by more than one hundred ten specialists and other interested people from all over the world. The purpose of the meeting was not to provide a definitive answer to the general questions raised by Bell's Theorem. It is likely that the debate will go on for quite a long time. Rather, it was meant to contribute to the important dialogue between different disciplines.
