The Book of Deadly Animals

Penguin UK Consider, if you can, the case of Jacob Fowler, who heard what he thought was the sound of his own skull cracking between the jaws of a grizzly bear - only to discover that it was. Or the Arizonan jogger who ran a mile back to her car with a rabid fox clamped to her arm before driving to hospital for live-saving inoculations. Or the woman who was attacked by a hyena, dragged from her tent by her face and survived to tell of her ordeal. The dangers of the animal kingdom are the stuff of legend but the reality of man's vulnerability and of nature's savage power is far more various, improbable and chilling than even the most active imagination would fear. In this unique work of nature writing, you will encounter the most formidable predators on land and sea - as well as the most overlooked, bizarre and inventive hazards that mother nature has to offer. Meet the cougar that can leap 40 feet and clear 8-foot fences with a fully-grown deer in its jaws, the tapeworm that's been known to grow as long as 82 feet in the human gut and the elephant that single-handedly destroyed an oil tanker. Drawing on an enormous host of true encounters between man and beast, this is the world's most authoritative compendium of animal attacks on human beings. With mordant wit and expert timing, Gordon Grice provides a gripping journey to the dark side of the animal kingdom and a celebration of its humbling, savage glory.

This Could Be Our Future

A Manifesto for a More Generous World

Random House Break free from a wealth-obsessed world Western society is trapped by three assumptions: 1) the point of life is to maximize your self-interest and wealth, 2) we're individuals trapped in an adversarial world, and 3) that this path is inevitable. These ideas separate us, keep us powerless, and limit our imagination for the future. We see them as the truth, but they are just a point of view that previous generations accepted as inevitable. It's time we replace them with something new. In this bold, powerful book, Yancey Strickler - co-founder of Kickstarter - lays out an inspiring vision for a new world we have the power to create and how we can change course. While the pursuit of wealth has produced innovation and prosperity, it's also produced dire consequences: environmental collapse, corruption, exploitation, and unhappiness around the world. We don't have to get rid of money entirely, though: we can co-opt the tools we have used toward better measurement of what matters, technology, and specificity of goals--and refocus them to build a more generous, fair, and future-prepared society. By re-calibrating our definition of value, a world of scarcity can blossom into a world of abundance. Hopeful but firmly grounded, full of concrete examples and bursting with creativity, This Could Be Our Future brilliantly dissects the world we live in and shows us a road map to the world we are capable of making.

The Last Lost World

Ice Ages, Human Origins, and the Invention of the Pleistocene

Penguin An enthralling scientific and cultural exploration of the Ice Age—from the author of How the Canyon Became Grand From a remarkable father-daughter team comes a dramatic synthesis of science and environmental history—an exploration of the geologic time scale and evolution twinned with the story of how, eventually, we have come to understand our own past. The Pleistocene is the epoch of geologic time closest to our own. The Last Lost World is an inquiry into the conditions that made it, the themes that define it, and the creature that emerged dominant from it. At the same time, it tells the story of how we came to discover and understand this crucial period in the Earth's history and what meanings it has for today.

Splash 20

Creative Compositions

Penguin While any subject can be developed with a variety of compositional strategies, in most cases, it is not the subject but the composition of the work that gives a painting its originality and appeal. Lost Letters of Medieval Life

English Society, 1200-1250

University of Pennsylvania Press Everyday life in early thirteenth-century England is revealed in vivid detail in this riveting collection of correspondence of people from all classes, from peasants and shopkeepers to bishops and earls. The documents presented here include letters between masters and servants, husbands and wives, neighbors and enemies, and cover a wide range of topics: politics and war, going to fairs and going to law, attending tournaments and stocking a game park, borrowing cash and doing favors for friends, investigating adultery and building a windmill. While letters by celebrated people have long been known, the correspondence of ordinary people has not survived and has generally been assumed never to have existed in the first place. Martha Carlin and David Crouch, however, have discovered numerous examples of such correspondence hiding in plain sight. The letters can be found in manuscripts called formularies—the collections of form letters and other model documents that for centuries were used to teach the arts of letter-writing and keeping accounts. The writing-masters and their students who produced these books compiled examples of all the kinds of correspondence that people of means, members of the clergy, and those who handled their affairs might expect to encounter in their business and personal lives. Tucked among the sample letters from popes to bishops and from kings to sheriffs are examples of a much more casual, ephemeral kind of correspondence. These are the low-level letters that evidently were widely exchanged, but were often discarded because they were not considered to be of lasting importance. Two manuscripts, one in the British Library and the other in the Bodleian Library, are especially rich in such documents, and it is from these collections that Carlin and Crouch have drawn the documents in this volume. They are presented here in their first printed edition, both in the original Latin and in English translation, each document splendidly contextualized in an accompanying essay.
