KOREAN EDUCATION IN CHANGING ECONOMIC AND DEMOGRAPHIC CONTEXTS

Springer Science & Business Media This edited volume offers a comprehensive survey of Korean education in transition. Divided into three parts, the book first assesses the current state of Korean education. It examines how the educational system handles the effects of family background and gender in helping students smoothly transition from school to the labor market. Next, the book introduces growing concerns over whether the traditional model of Korean education can adequately meet the demands of the emerging knowledge-based economy. It examines features of new reform measures that have been introduced to help Korean education prepare students for the new economy. The third part discusses how an influx of diverse migrant groups, including marriage migrants, migrant workers, and North Korean migrants, and the rising divorce rate — two major demographic changes— challenge the fundamental assumption of cultural homogeneity that has long been a part of Korean education. This detailed analysis of a society and educational system in transition will appeal to a wide range of readers, from those involved with Korean education to educators and administrators in countries currently looking for ways to handle their own economic and demographic changes.

ECONOMICS WITH CALCULUS

World Scientific This textbook provides a calculus-based introduction to economics. Students blessed with a working knowledge of the calculus would find that this text facilitates their study of the basic analytical framework of economics. The textbook examines a wide range of micro and macro topics, including prices and markets, equity versus efficiency, Rawls versus Bentham, accounting and the theory of the firm, optimal lot size and just in time, monopoly and competition, exchange rates and the balance of payments, inflation and unemployment, fiscal and monetary policy, IS-LM analysis, aggregate demand and supply, speculation and rational expectations, growth and development, exhaustible resources and over-fishing. While the content is similar to that of conventional introductory economics textbook, the assumption that the reader knows and enjoys the calculus distinguishes this book from the traditional text.

EXCELLENCE FOR ALL

HOW A NEW BREED OF REFORMERS IS TRANSFORMING AMERICA'S PUBLIC SCHOOLS

Vanderbilt University Press By the early twenty-first century, a startling consensus had emerged about the overall aim of American school reform. In an era of political discord, and in a field historically known for contentiousness, the notion of promoting educational excellence for all students was a distinct point of bipartisan agreement. Shaped by a corps of entrepreneurial reformers intent on finding "what works" and taking it to scale, this hybrid vision won over the nation's most ambitious and well-resourced policy leaders at foundations and nonprofits, in state and federal government, and in urban school districts from coast to coast. "Excellence for all" might, at first glance, appear to be nothing more than a rhetorical flourish. Who, after all, would oppose the idea of a great education for every student? Yet it is hardly a throwaway phrase. Rather, it represents a surprising fusion of educational policy approaches that had been in tense opposition throughout the twentieth century--those on the right favoring social efficiency, and those on the left supporting social justice. This book seeks to understand why the "excellence for all" vision took hold at the time it did, unpacks the particular beliefs and assumptions embedded in it, and details the often informal coalition building that produced this period of consensus. Examining the nation's largest urban school districts (Los Angeles, Chicago, and New York), the author details three major reform efforts in chapters titled "The Right Space: The Small Schools Movement"; "The Right Teachers: Teach for America"; and "The Right Curriculum: Expanding Advanced Placement."

WHAT DO ECONOMISTS KNOW?

NEW ECONOMICS OF KNOWLEDGE

Routledge A provocatively rethink of the questions of what, how and for whom economics is produced. Academic economists in the twentieth century have presumed to monopolise economic knowledge, seeing themselves as the only legitimate producers and consumers of this highly specialized commodity. This has encouraged a narrow view of economics as little more than a private dialogue among professionally licensed knowers. This book recasts this narrow view.

AN ANALYSIS OF ADVANCED PLACEMENT (AP') EXAMINATIONS IN ECONOMICS AND COMPARATIVE GOVERNMENT AND POLITICS. RESEARCH REPORT NO. 2001-4. ETS RR-01-17

Advanced Placement Program' (AP') Examinations in Macroeconomics, Microeconomics, and Comparative Government and Politics were studied to examine college course performance and gender differences. It was concluded that students who had received college credit for AP performed as well or better in higher-level college courses in Macroeconomics and Microeconomics than students who had not taken AP courses. Gender differences in performance were observed in all three examinations, but the greatest gender differences, favoring male students, were observed for Comparative Government and Politics. A survey of instructors of Comparative Government and Politics indicated that only a small percentage of instructors had observed gender differences in performance in their courses, however. The following are appended: (1) National Survey of College Faculty: Questionnaire for Instructors of Comparative Government and Politics, 2000; (2) Open-Ended Comments Obtained in the Survey; and (3) Descriptions of Advanced Placement Courses and Exams in Macroeconomics, Microeconomics, and Comparative Government and Politics.
