The European Observatory for SMEs

Sixth Report

Against the background of completing the European Single Market is the observance and monitoring of small and medium-sized enterprises (SMEs). With about 20 million such businesses, employing some 117 million people, SMEs represent an economic lynchpin to the success of the Single Market concept. This 6th report, from the Observatory, and prepared by a consortium led by KPMG Consulting, focuses on the economic and financial needs of SMEs. Specific chapters look at their products and services, the recruitment and training of staff, particularly vocational training, and their access to investment. The report is concluded with the set

of policy recommendations, which are aimed at strengthening the entrepreneurial culture. These recommendations include: to provide more information on public procurement to SMEs; to promote further research on the impact of electronic commerce on the position of SMEs.

Scrapbook

a story of art

Whytes "Access to arts and culture should be free for everyone," says artist Jack Whyte. "Anyone can tour my 2015 exhibits online for free and - from anywhere in the world." He and his son Dylan Whyte created a virtual gallery this past Spring where artworks are experienced up close and personally, as if literally standing in front of them. "It's great to produce and present work on a scale of my choice, the way I originally envisioned it," Jack explains. As a young boy he never imagined having the opportunity to design and construct art without restriction. The discovery of a platform which allows for creative freedom has provided a new means for connecting with others. Jack Whyte was born in 1939 in Toronto, Ontario - just before the start of the second World War. Having been

influenced at an early age by a creative environment, he has pursued artistic practices as well as the adventure of invention for more than 55 years. 2015 marks the beginning of a new exploit for Jack, the release of his latest publication, 'Scrapbook: a story of art'. From modelling with Mickey Mouse as a child to showing at the Pollock Gallery and even winning awards for videos, this book recounts the journey and challenges faced by a becoming artist and the enormous adversity that life can throw at you. In the autumn of 2014, Jack mentioned to his son, Dylan, that he was starting a book and could use some help with it. Over the course of a long winter and many toasty afternoons by the fire, they searched for, found, prepared and put together what has become a very personal and thoughtful one-of-a-kind memoir. "It's not until you have the whole story that you really understand how the pieces all fit together," says Dylan Whyte. "It's also difficult to put everything into perspective when you're part of the story. Getting to the point where I can hold a part history in my hands helps me understand where I come from." When Jack and Dylan started producing the book, it was just a collection of stories and images, but with months of collaboration and hard work, they have created an album that is delightfully personable and genuinely familiar. "Jack tells you about the experiences that influenced him as an artist and includes all sorts of fun stories from his life," says Ashley Whyte, wife of Dylan and proprietor of the Whytes gallery on the waterfront in the Gore Bay Harbour Centre. "There is also an abundance of never-before-seen photographs and a wealth of artwork. When Jack named it Scrapbook, he really meant it." Coming in at a whole 456 pages, Scrapbook was digitally published in June of this year and is available online for everyone to read for free. Although it was only meant to be a digital publication, new economic platforms have given Scrapbook the opportunity to become something more than just a concept. "The book is obviously quite big and financing a print run on our own wouldn't be viable, so we talked about other options and crowdfunding came up as a potential," explains Ms. Whyte. "It's an incredibly different approach than anything Jack is familiar with, he has always done things on his own. It wasn't until only recently that we knew something like this even existed." Crowdfunding is the process of funding your projects through small contributions made by many individuals in order to attain a certain monetary goal, typically via the internet. The model that has been around the longest is rewards-based crowdfunding, where people can donate and receive goods in recognition of their support. Ashley and Dylan Whyte have taken Scrapbook to RocketHub; a platform specializing in arts and entertainment, to seek help in bringing Jack's story to life. They've launched their campaign and are working to raise \$11,500 to cover the costs of printing a limited edition hardcover. In the meantime, Scrapbook remains free for everyone to read online and enjoy. Families Caring for an Aging America

National Academies Press Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

The Future of Nursing

Leading Change, Advancing Health

National Academies Press The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Non-bank Financial Institutions and Capital Markets in Turkey

World Bank Publications Currently, Turkey's financial services industry is in an early stage of development with credit markets dominated by banking and capital markets dominated by Government securities. Longstanding macro-economic instability and inflation have discouraged investment in financial assets and crowded out funding for the private sector. The resulting lack of depth and breadth has made the financial sector in Turkey vulnerable to shocks resulting in repeated crises, and has diminished its intermediation efficiency. This study analyzes the state of development and prospects for future growth of Turkish non-bank financial institutions and capital markets. It identifies the key policy issues that should be addressed in order to develop non-bank financial institutions in Turkey. Some of the themes included in the discussion and policy recommendations are: mobilizing savings; building an institutional investor base comprising insurance companies, private pension funds, and mutual funds; developing equity markets, debt markets, and derivative markets; developing leasing, factoring and venture capital companies; and strengthening confidence in financial markets through improved corporate governance.

College Algebra

College Algebra provides a comprehensive exploration of algebraic principles and meets scope and sequence requirements for a typical introductory algebra course. The modular approach and richness of content ensure that the book meets the needs of a variety of courses. College Algebra offers a wealth of examples with detailed, conceptual explanations, building a strong foundation in the material before asking students to apply what they've learned. Coverage and Scope In determining the concepts, skills, and topics to cover, we engaged dozens of highly experienced instructors with a range of student audiences. The resulting scope and sequence proceeds logically while allowing for a significant amount of flexibility in instruction. Chapters 1 and 2 provide both a review and foundation for study of Functions that begins in Chapter 3. The authors recognize that while some institutions may find this material a

prerequisite, other institutions have told us that they have a cohort that need the prerequisite skills built into the course. Chapter 1: Prerequisites Chapter 2: Equations and Inequalities Chapters 3-6: The Algebraic Functions Chapter 3: Functions Chapter 4: Linear Functions Chapter 5: Polynomial and Rational Functions Chapter 6: Exponential and Logarithm Functions Chapters 7-9: Further Study in College Algebra Chapter 7: Systems of Equations and Inequalities Chapter 8: Analytic Geometry Chapter 9: Sequences, Probability and Counting Theory

Orbital Mechanics for Engineering Students

The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems

How People Learn

Brain, Mind, Experience, and School: Expanded Edition

National Academies Press First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn

examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Principles of Mathematics Book 1 Teacher Guide

New Leaf Publishing Group Teacher Guide for Book 1 of the Principles of Mathematics - Biblical Worldview Curriculum for junior high! Math is a real-life tool that points us to God and helps us explore His creation, yet it often comes across as dry facts and meaningless rules. Here at last is a curriculum that has a biblical worldview integrated throughout the text and problems, not just added as an afterthought. The resources in the Teacher Guide will help students master and apply the skills learned in the Student Textbook. What does this Teacher Guide include? Worksheets, Quizzes, and Tests: These perforated, three-hole punched pages help provide practice on the principles taught in the main student textbook. Answer Keys: The answers are included for the worksheets, quizzes, and tests found in this Teacher Guide. Schedule: A suggested calendar schedule is provided for completing the material in one year, though this can be adapted to meet individual student needs. There is also an accelerated schedule for completing the material in one semester. Are there any prerequisites for this course? This curriculum is aimed at grades 6-8, fitting into most math approaches the year or two years prior to starting high school algebra. If following traditional grade levels, Book 1 should be completed in grade 6 or 7, and Book 2 in grade 7 or 8. In Book 1 students should have a basic knowledge of arithmetic (basic arithmetic will be reviewed, but at a fast pace and while teaching problem-solving skills and a biblical worldview of math) and sufficient mental development to think through the concepts and examples given. Typically, anyone in sixth grade or higher should be prepared to begin. The focus of the course is actually learning math for life, not simply preparing to pass a test.
