Geothermal Energy From Theoretical Models to Exploration and Development Springer Science & Business Media The internal heat of the planet Earth represents an inexhaustible reservoir of thermal energy. This form of energy, known as geothermal energy has been utilized throughout human history in the form of hot water from hot springs. Modern utilization of geothermal energy includes direct use of the heat and its conversion to other forms of energy, mainly electricity. Geothermal energy is a form of renewable energy and its use is associated with very little or no CO2-emissions and its importance as an energy source has greatly increased as the effects of climate change become more prominent. Because of its inexhaustibility it is obvious that utilization of geothermal energy will become a cornerstone of future energy supplies. The exploration of geothermal resources has become an important topic of study as geology and earth science students prepare to meet the demands of a rapidly growing industry, which involves an increasing number of professionals and public institutions participating in geothermal energy related projects. This book meets the demands of both groups of readers, students and professionals. Geothermal Energy and its utilization is systematically presented and contains the necessary technical information needed for developing and understanding geothermal energy projects. It presents basic knowledge on the Earth's thermal regime and its geothermal energy resources, the types of geothermal energy used as well as its future potential and the perspectives of the industry. Specific chapters of the book deal with borehole heat exchangers and with the direct use of groundwater and thermal water in hydrogeothermal systems. A central topic are Enhanced Geothermal Systems (hot-dry-rock systems), a key technology for energy supply in the near future. Pre-drilling site investigations, drilling technology, well logging and hydraulic test programs are important subjects related to the exploration phase of developing Geothermal Energy sites. The chemical composition of the natural waters used as a heat transport medium in geothermal systems can be used as an exploration tool, but chemistry is also important during operation of a geothermal power plant because of potential scale formation and corrosion of pipes and installations, which needs to be prevented. Graduate students and professionals will find in depth information on Geothermal Energy, its exploration and utilization. Food should be tasty, healthy, sustainable and preferably not too expensive. But food should also be safe and with sufficient guarantees on maintaining good quality aspects until the end of shelf life. The various actors in the food supply chain have an interest in verifying the expected quality and safety by means of microbiological analyses of food. Measurement brings knowledge and microbiological guidelines help in the decision-making process for judging the acceptability of food or food production processes. The present handbook provides microbiological guidelines and current applicable EU legal criteria (status 1.1.2018) for a wide range of food categories (dairy, meat, seafoods, plant-based foods, bakery products, composite foods, shelf-stable food, water) and subcategories therein, based upon the type of food processing and intrinsic characteristics of the foods. This book can be consulted to provide quick answers on the expected microbiological contamination of foodstuff. It can help in interpretation of test results in assessing good (hygienic) practices in the production of food, determining the shelf life and ensuring food safety. The handbook also presents definitions of the wide variety of foodstuffs available and some reflections on, in particular, food safety issues or the on-going debate for some food items in assessing microbial quality. This book provides crucial information about food safety, for the use of students and professionals. EXTRACT "First we eat, then we do everything else" M.F.K. Fisher Food plays an important part in everyday life. But when being a food scientist or in the food business, food gets to be an even bigger part of your life. Our team at the Food Microbiology and Food Preservation research group (FMFP-UGent) at Ghent University during its academic tasks in education, research, scientific activities at committees, but also in interaction with many food companies and stakeholders in the food supply chain in projects or contract work, has built up considerable expertise on the microbiological analysis of a large variety of foodstuffs. Being situated in Ghent, and thus close to Brussels, the heart of Europe, we intrinsically have to understand and deal with legal EU criteria or action limits. The latter is the reason why this book is mainly oriented towards inclusion or making reference to EU legal microbiological criteria for foodstuffs as well. ABOUT THE AUTHORS The main author, Prof. Mieke Uyttendaele, leads, together with Prof. Frank Devlieghere, the Food Microbiology and Food Preservation Research Group (FMFP-UGent) at Ghent University, Belgium. Her teaching and research area covers aspects of microbiological analysis of foods, food safety and food hygiene. She has built over twenty years of experience by executing, initiating and coordinating various projects in this research discipline dealing with sampling and testing to collect baseline data on the microbial contamination of foods, looking into the virulence of food-borne pathogens, elaborating challenge testing to study the behavior of food-borne pathogens. All this information serves as an input for quality assurance and microbial risk assessment to support food safety decision-making and setting microbiological criteria. She was/is the promotor of more than 25 Ph.D students (including EU and non-EU citizens). Throughout her career, Prof. Uyttendaele has published more than 270 peer reviewed scientific papers, authored several book chapters and presented at numerous international Conferences/Workshops. Throughout the years she has also used her scientific expertise in interpretation of test results for analyses obtained in routine monitoring or analysis executed at the food service lab at FMFP-UGent.
