Whilst the focus is predominantly on the US and UK, the contributors also address more general and global issues and different contexts of reception, in an attempt to look at this kind of comedy from different perspectives. Over the last few decades, taboo comedy has become a staple of television programming, thus raising issues concerning its functions and appropriateness, and making it an extremely relevant subject for those interested in how both humour and television work. **InfoWorld** InfoWorld is targeted to Senior IT professionals. As television continues to undergo a myriad of significant changes, Netflix has proven itself to be the dominant force in this development, simultaneously driving a number of these changes and challenging television's existing institutional structures. This comprehensive study explores the pre-history of Netflix, the role of binge-watching in its organisation and marketing, and Netflix's position as a transnational broadcaster. It also examines different concepts of control and the role these play in the history of ancillary technologies, from the remote control to binge-watching as Netflix's iteration of giving control to the viewers. By focusing on Netflix's relationship with the linear television schedule, its negotiations of quality and marketing, as well as the way Netflix integrates into national media systems, Netflix and the Re-invention of Television illuminates the importance of Netflix's role within the processes of TV IV. **Parentology Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask** Simon and Schuster An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time. **Television Production** Routledge Gain the skills you need to succeed in the television industry and master the production process, from shooting and producing, to editing and distribution. Which is basically everyone. Because even when you cross the street, you are dealing with the future. Will the cyclist from the right arrive at a certain point at the same time as you will? Then you should adjust your plan for crossing the road accordingly. You do not need this book for this adjustment. However, future developments are often not so easy to predict, and it is often not possible to make reliable plans. While we might wish for this certainty and predictability, all too often it is unrealistic. The book offers some signposts, backgrounds, experiences, and ideas for action for the confident handling of uncertainty. These ideas should enable the readers to make the various images and assumptions about futures visible and usable in the present. There are many approaches and methods for this. The competency to use these methods for different purposes is called futures literacy. It could be one of the most important competencies of humankind in the 21st century. **Moody's Industrial Manual** Covering New York, American & regional stock exchanges & international companies. **The Digital Consumer Technology Handbook A Comprehensive Guide to Devices, Standards, Future Directions, and Programmable Logic Solutions** Elsevier The consumer electronics market has never been as awash with new consumer products as it has over the last couple of years.
