CARE WITHOUT COVERAGE

TOO LITTLE, TOO LATE

National Academies Press **Many Americans believe that people who lack health insurance somehow get the care they really need. Care Without Coverage examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital--based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million -- one in seven--working--age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.**

The committee assembled for this event was asked to share insights and consider ways in which the objectives of the report could be achieved from the standpoint of what women need to know, the best models of screening programs, manpower, risk stratification, basic research, and payment. This symposium seeks to provide continuing food for thought and ideas for actions in support of breast cancer detection and diagnosis and saving women's lives.**

CHANGING HEALTH CARE SYSTEMS AND RHEUMATIC DISEASE

National Academies Press Market forces are driving a radical restructuring of health care delivery in the United States. At the same time, more and more people are living comparatively long lives with a variety of severe chronic health conditions. Many such people are concerned about the trend toward the creation of managed care systems because their need for frequent, often complex, medical services conflicts with managed care's desires to contain costs. The fear is that people with serious chronic disorders will be excluded from or underserved by the integrated health care delivery networks now emerging. Responding to a request from the National Institute of Arthritis and Musculoskeletal and Skin Diseases, this book reflects the results of a workshop that focused on the following questions: Does the model of managed care or an integrated delivery system influence the types of interventions provided to patients with chronic conditions and the clinical and health status outcomes resulting from those interventions? If so, are these effects quantitatively and clinically significant, as compared to the effects that other variables (e.g., income, education, ethnicity) have on patient outcomes? If the type of health care delivery system appears to be related to patient care and outcomes, can specific organizational, financial, or other variables be identified that account for the relationships? If not, what type of research should be pursued to provide the information needed about the relationship between types of health care systems and the processes and outcomes of care provided to people with serious chronic conditions?

THE POLITICAL ECONOMY OF UNIVERSAL HEALTHCARE IN AFRICA

EVIDENCE FROM GHANA

Taylor & Francis **The global rise in pandemics, most recently COVID-19, and other health challenges, some of which are due to climate change, have imposed significant challenges on the healthcare systems in economies around the world. Thus, this book deals with an issue that is very timely and relevant, not just in Africa but globally. It critically assesses healthcare reforms in Ghana under the Fourth Republic, since 1993. Although it focuses on Ghana's National Health Insurance Scheme of 2003, the book instructively goes beyond this program. The book argues that, although Ghana is a bellwether of healthcare reforms in Africa, its healthcare initiatives are still far from the service haven of healthcare as a human right. Themes that animate the book's argument include the need to translate human rights law, such as the right to health, into practical policies that work for ordinary citizens. Key highlights of the book include an increased accent on health as a human right, emphasis on comparative analysis in healthcare studies, and the formulation of a four-hallmark framework, embedded in economics, law, politics, and human rights, to act as a guide for assessment of healthcare reforms in Africa in particular, and Ghana more specifically. Using Ghana as a case study and analytical window into the world, the book offers a valuable and timely resource for academics, students and policymakers across the disciplines of development and healthcare economics, law, public policy, political science, sociology, and African and Caribbean studies, as well as in various fields in health science.**

MONITORING HIV CARE IN THE UNITED STATES

INDICATORS AND DATA SYSTEMS

National Academies Press **The number of people living with HIV/AIDS (PLWHA) in the United States is growing each year largely due both to advances in treatment that allow HIV-infected individuals to live longer and healthier lives and due to a steady number of new HIV infections each year. The U.S. Centers for Disease Control and Prevention (CDC) estimates that there were 1.2 million people living with HIV infection in the United States at the**

end of 2008, the most recent year for which national prevalence data are available. Each year, approximately 16,000 individuals die from AIDS despite overall improvements in survival, and 50,000 individuals become newly infected with HIV. In 2011, the CDC estimated that about three in four people living with diagnosed HIV infection are linked to care within 3 to 4 months of diagnosis and that only half are retained in ongoing care. In the context of the continuing challenges posed by HIV, the White House Office of National AIDS Policy (ONAP) released a National HIV/AIDS Strategy (NHAS) for the United States in July 2010. The primary goals of the NHAS are to: reduce HIV incidence; increase access to care and optimize health outcomes; and reduce HIV-related health disparities. *Monitoring HIV Care in the United States* addresses existing gaps in the collection, analysis, and integration of data on the care and treatment experiences of PLWHA. This report identifies critical data and indicators related to continuous HIV care and access to supportive services, assesses the impact of the NHAS and the ACA on improvements in HIV care, and identifies public and private data systems that capture the data needed to estimate these indicators. In addition, this report addresses a series of specific questions related to the collection, analysis, and dissemination of such data. *Monitoring HIV Care in the United States* is the first of two reports to be prepared by this study. In a forthcoming report, also requested by ONAP, the committee will address the broad question of how to obtain national estimates that characterize the health care of people living with HIV in the United States. The second report will include discussion of challenges and best practices from previous large scale and nationally representative studies of PLWHA as well as other populations.

A ready-to-use instrument for assessing the soundness of guidelines. Six case studies exploring issues involved when practitioners use guidelines on a daily basis. JUST HEALTH

MEETING HEALTH NEEDS FAIRLY

Cambridge University Press **In this book by the award-winning author of *Just Healthcare*, Norman Daniels develops a comprehensive theory of justice for health that answers three key questions: what is the special moral importance of health? When are health inequalities unjust? How can we meet health needs fairly when we cannot meet them all? Daniels' theory has implications for national and global health policy: can we meet health needs fairly in ageing societies? Or protect health in the workplace while respecting individual liberty? Or meet professional obligations and obligations of justice without conflict? When is an effort to reduce health disparities, or to set priorities in realising a human right to health, fair? What do richer, healthier societies owe poorer, sicker societies? *Just Health: Meeting Health Needs Fairly* explores the many ways that social justice is good for the health of populations in developed and developing countries.**
