Fighting Fraud and Corruption in the Humanitarian and Global Development Sector [Routledge](#) There are an estimated 40,000 international Non-Government Organisations (NGOs), working

in an enormous global aid industry; official development assistance alone reached £90bn in 2014. This is supplemented by huge voluntary giving - the UK public, for example, give around £1bn a year to overseas causes. These organisations face a unique challenge from fraud and corruption. Operating in the world's most under-developed and fragile environments, with minimal infrastructure and trust-based cultures, the risk is high. And, being wholly reliant on donors and supporters for income, so are the stakes. Researchers make different estimates of the scale of the problem facing the sector. Some research implies that losses to the global aid budget caused by occupational fraud and abuse may be in the billions of pounds, while those to the British public's voluntary overseas donations could be in the tens of millions. For many sector professionals working in the developing world, these estimates are readily believable. Fighting Fraud and Corruption in the Humanitarian and Global Development Sector by Oliver May is a timely, accessible and relevant how-to guide, which explores the scale and nature of the threat, debunks pervasive myths, and shows readers how to help their NGOs to better deter, prevent, detect and respond to fraud and corruption. [Managing Financial Institutions Markets and Sustainable Finance Taylor & Francis](#) This book goes beyond traditional financial institutions textbooks, which tend to focus on mathematical models for risk management and the technical aspects of measuring and managing risk. It focuses on the role of financial institutions in promoting social and economic goals for the communities in which they operate for the greater good, while also meeting financial and competitive challenges, and managing risks. Cooperman divides the text into seven easily teachable modules that examine the real issues and challenges that managers of financial institutions face. These include the transformative changes presented by social unrest, climate change and resource challenges, as well as the changes in how financial institutions operate in light of the opportunities that rapid innovations and disruptive technologies offer. The book features: Up-to-date coverage of new regulations affecting financial institutions, such as Dodd Frank and new SEC regulations. Material on project financing and new forms of financing, including crowd funding and new methods of payment for financial institutions. New sustainable finance models and strategies that incorporate environmental, social, and corporate governance considerations. A new chapter on sustainable financial institutions, social activism, the greening of finance, and socially responsible investing. Practical cases focusing on sustainability give readers insight into the socioeconomic risks associated with climate change. Streamlined and accessible, [Managing Financial Institutions](#) will appeal to students of financial institutions and markets, risk management, and banking. A companion website, featuring PowerPoint slides, an Instructor's Manual, and additional cases, is also available. [Climate Change and Insurance Disaster Risk Financing in Developing Countries Earthscan](#) Climate change brings about a new set of major economic risks arising from changing weather patterns, extreme weather events and rising sea levels. Most at risk are developing countries who, despite considerable post-disaster donor aid, have been bearing the major brunt of disaster-related losses. One adaptation solution that is rapidly gaining the support of countries and international donors is a risk transfer to the global reinsurance and capital markets. This volume, a special issue of the journal *Climate Policy*, explores the role that insurance-based mechanisms can play in helping developing countries prepare for climate change. It offers a unique and comprehensive perspective on the potential role of insurance solutions in global adaptation to climate change and attempts to engender debate on the role of insurance in reducing global emissions and encouraging climate-friendly corporate behaviour. [Multinational Financial Management John Wiley & Sons](#) The eleventh edition of [Multinational Financial Management](#) is a comprehensive survey of the essential areas of the international financial market environment, including foreign exchange and derivative markets, risk management, and international capital markets and portfolio investment. Designed for upper-level undergraduate and masters-level courses in international finance and management, this textbook offers readers a conceptual framework for analyzing key financial decisions of multinational firms. The authors both explain and simplify multinational financial management by illustrating how its basic principles share the same foundation as domestic corporate finance. Assuming no prior knowledge of international economics or finance, this substantially revised new edition builds upon the fundamental principles of domestic financial management to examine the unique dimensions of international finance. Readers are presented with a solid theoretical knowledgebase for examining decision problems, as well as practical analytical techniques that clarify the often-ambiguous guidelines used by international financial executives. All the traditional areas of corporate finance are explored from the perspective of a multinational corporation, focusing on elements rarely encountered in domestic finance such as multiple currencies, segmented capital markets, and political risks of nationalization or expropriation. [Global Governance of Civil Aviation Safety Taylor & Francis](#) This book indicates the shortcomings of the current international legal system and customary international norms that govern international aviation law to comply with contemporary air transport market realities. As the air transport market develops globally, the safety regime of civil aviation should also be governed and applied globally. In this book, the author departs from current international legal norms to examine the emerging legal field of global administrative law. Through that lens, the possibility of reconstructing the set of legal mechanisms that govern domestic and international administrative interaction in the global field of aviation safety is explored. This book demonstrates that a legal system is never complete but always develops in tandem with changing needs, i.e. the participation of the affected parties. Exploring the principles of GAL theory contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety standards that would otherwise not be covered by customary international law. In particular, the principles of GAL theory regarding global governance and the 'public' character of global regulations, the role of individuals and states in global governance, and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in practice. It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these accessible to individuals by way of national courts. Finally, establishing public awareness of global aviation safety standards will eventually create greater pressure on states to implement and enforce them. This book is in an area increasing academic and research interest of practitioners of public international aviation law, global administrative law, global governance, and global aviation safety, global air transport market regulations. Within a decade the banking world has witnessed two epochal events with potential to redraw the map of international financial centres: but how much has this map actually changed since 2008, and how is it likely to change in the near future? [International Financial Centres after the Global Financial Crisis and Brexit](#) gathers together leading economic historians, geographers, and other social scientists to focus on the post-2008 developments in key international financial centres. It focuses on the shifting hierarchies of New York, London, Paris, Geneva, Zurich, Frankfurt, Singapore, Hong Kong, Beijing, Shanghai, and Tokyo to question whether Asian financial centres have taken advantage of the crisis in the West. It also examines the medium-effects of the crisis, the level of regulation, and the rise of new technology (fintech). By

exploring these crucial changes, it questions whether shifts in the financial industry and the global landscape will render these centres unnecessary for the functioning of the global economy, and which cities are likely to emerge as hubs of new financial technology.

Alternative Paths to Public Financial Management and Public Sector Reform [Experiences from East Asia](#) [World Bank Publications](#) Reforming public-sector organizations--their structures, policies, processes and practices--is notoriously difficult, in rich and poor countries alike. Even in the most favorable of circumstances, the scale and complexity of the tasks to be undertaken are enormous, requiring levels of coordination and collaboration that may be without precedent for those involved. Entirely new skills may need to be acquired by tens of thousands of people. Compounding these logistical challenges is the pervasive reality that circumstances often are not favorable to large-scale reform. Whether a country is rich or poor, the choice is not whether, but how, to reform the public sector--how optimal design characteristics, robust political support, and enhanced organizational capability to implement and adapt will be forged over time. This edited volume helps address the "how?" question. It brings together reform experiences in public financial management and the public sector more broadly from eight country cases in East Asia: Cambodia, Indonesia, Lao People's Democratic Republic, Malaysia, Myanmar, Papua New Guinea, Thailand, and Vietnam. These countries are at different stages of reform; most of the reform efforts would qualify as successes, while some had mixed outcomes, and others could be considered failures. The focus of each chapter is less on formally demonstrating success (or not) of specific reform, but on documenting how reformers maneuvered within different country contexts to achieve specific outcomes. Despite the great difficulty in reforming the public sector, decision-makers can draw renewed energy and inspiration, learning from those countries, sectors, and subnational spaces where substantive (not merely cosmetic) change has been achieved, and they can identify what pitfalls to avoid.
