INNOVATION, SUSTAINABILITY AND MANAGEMENT IN MOTORSPORTS

THE CASE OF FORMULA E

Springer Nature "There's probably no better sport than Formula E to present and study the science and practice of innovation within (motor)sport, and this book is a must read for those active within this fascinating area". - Dr. Kristof de Mey, Sports Technology, Innovation & Business Developer at Ghent University, Belgium This open access book provides novel insights on management innovation and sustainability in motorsport. Utilizing the all-electric racing championship called Formula E as case, it draws upon data from multiple sources such as sustainability reports of Formula and its stakeholders, media data, podcasts and newspaper articles, partner publications, and social media outputs. It aims to generate a theoretical model that describes and explains the optimal conditions for innovation when it comes to enhancing a sport organisation's commercial product. Apart from its general transferability to sports research, this model enables further study of a motorsport phenomenon that has been hailed by media as the championship, which affirms money in sustainability. It has also been emphasized by sport researchers as a highly relevant case to study

management innovation. This book will be interesting to academics working in sports management, knowledge management, innovation and sustainability. HOW GROWTH REALLY HAPPENS

THE MAKING OF ECONOMIC MIRACLES THROUGH PRODUCTION, GOVERNANCE, AND SKILLS

Princeton University Press A groundbreaking study that shows how countries can create innovative, production-based economies for the twenty-first century Achieving economic growth is one of today's key challenges. In this groundbreaking book, Michael Best argues that to understand how successful growth happens we need an economic framework that focuses on production, governance, and skills. This production-centric framework is the culmination of three simultaneous journeys. The first has been Best's visits to hundreds of factories worldwide, starting early as the son of a labor organizer and continuing through his work as an academic and industrial consultant. The second is a survey of two hundred years of economic thought from Babbage to Krugman, with stops along the way for Marx, Marshall, Young, Penrose, Richardson, Schumpeter, Kuznets, Abramovitz, Keynes, and Jacobs. The third is a tour of historical episodes of successful and failed transformations, focusing sharply on three core elements—the production system, business organization, and skill formation—and their interconnections. Best makes the case that government should create the institutional infrastructures needed to support these elements and their interconnections rather than subsidize individual enterprises. The power of Best's alternative framework is illustrated by case studies of transformative experiences previously regarded as economic "miracles":

America's World War II industrial buildup, Germany's postwar recovery, Greater Boston's innovation system, Ireland's tech-sector boom, and the rise of the Asian Tigers and China. Accessible and engaging, *How Growth Really Happens* is required reading for anyone who wants to advance today's crucial debates about industrial policy, climate change, globalization, technological change, and the future of work.

MEDIA, MASCULINITIES, AND THE MACHINE

F1, TRANSFORMERS, AND FANTASIZING TECHNOLOGY AT ITS LIMITS

Bloomsbury Publishing USA Media, Masculinities, and the Machine identifies a distinctive phenomenon in today's media culture - the contemporary male fantasy of 'suiting up' and pushing technology to its limits. The authors deconstruct this fantasy using two in-depth studies from American, British and global media: the social imagining of hi-tech in the long-running Transformers franchise and global Formula One motorsport, with links to numerous other areas of contemporary culture. By drawing on non-representational

theory and the latest theories of affect while employing the method of autoethnography to explore what boys and men 'want' and say, the book offers a timely contribution to our understanding of contemporary cultural attachments. The book provides informative accounts of two instances united by their apparent gender focus and by their interest in ways of imagining high-tech. Tracking their theme through TV, cinema, toys, magazines, merchandising, and the culture of the gadget, the authors raise important questions about mediated masculinities today and propose a new theoretical framework for uncovering what is going on.

SPORTS EVENTS, SOCIETY AND CULTURE

Routledge This innovative and timely volume moves beyond existing operational and pragmatic approaches to events studies by exploring sports events as social, cultural, political and mediatised phenomena. As the study of this area is developing there is now a need for critical and theoretically informed debate regarding conceptualisation, significance and roles. This edited collection explores the core themes of consumption, media technologies, representation, identities and culture to offer new insight into how sports events contribute to generation of individual and shared meaning over personal, community and national identities as well as the associated issues of conflict, resistance and power. Chapters promote a critical (re)evaluation of emerging empirical research from a diverse range of sports events and locations from the international to local level. A multi-disciplinary approach is taken with contributions from areas including sports studies, media studies, sociology, cultural studies, communications, politics, tourism and gender studies. Written by leading academics in the area, this thorough exploration of the contested relationship between sports events, society and culture will be of interest to students, academics and researchers in Events, Sport, Tourism and Sociology.
