Applications of Monte Carlo Methods in Biology, Medicine and Other Fields of Science

BoD - Books on Demand **This volume is an eclectic mix of applications of Monte Carlo methods in many fields of research should not be surprising, because of the ubiquitous use of these methods in many fields of human endeavor. In an attempt to focus attention on a manageable set of applications, the main thrust of this book is to emphasize applications of Monte Carlo simulation methods in biology and medicine.**

Computational Finance

A Scientific Perspective

World Scientific Computational finance deals with the mathematics of computer programs that realize financial models or systems. This book outlines the epistemic risks associated with the current valuations of different financial instruments and discusses the corresponding risk management strategies. It covers most of the research and practical areas in computational finance. Starting from traditional fundamental analysis and using algebraic and geometric tools, it is guided by the logic of science to explore information from financial data without prejudice. In fact, this book has the unique feature that it is structured around the simple requirement of objective science: the geometric structure of the data = the information contained in the data.

Immunobiology of Organ Transplantation

Springer Science & Business Media Currently, individuals interested in seeking an in-depth discussion of transplantation immunology must seek individual articles published in several journals, or extrapolate information from various non-transplant immunology textbooks. The purpose of this text is to provide the reader with a single source of information for the basic science of immunobiology of organ transplantation. It is unique that it focuses on immunobiology from the basic research side, with an emphasis on the cellular and molecular levels. The readers will be physicians, scientists, and graduate students interested and engaged in the study of immunology as it relates to allo- and xenotransplantation. This book is designed to be the reference standard for the immunobiology of transplantation.

Spin Correlations in tt Events from pp Collisions

Measured at $\sqrt{s} = 7$ TeV in the Lepton+Jets Final State with the ATLAS Detector

Springer This thesis introduces readers to the Standard Model, the top quark and its properties, before explaining the concept of spin correlation measurement. The first measurement of top quark spin correlations at the LHC in the lepton+jets decay channel is presented. As the heaviest elementary particle, the top quark plays an essential role in the Standard Model of elementary particle physics. In the case of top quarks being produced in pairs at hadron colliders, the Standard Model predicts their spins to be correlated. The degree of correlation depends on both the production mechanism and properties of the top quark. Any deviation from the Standard Model prediction can be an indicator for new physics phenomena. The thesis employs an advanced top quark reconstruction algorithm including dedicated identification of the up- and down-type quarks from the W boson decay.

The Builder

New Ground

The Advent of Local Environmental Law

Environmental Law Institute **New Ground: The Advent of Local Environmental Law** presents a collection of papers examining local environmental law and its strategic role in shaping an appropriate response to a new generation of environmental and land use challenges. Contributors are distinguished scholars and practitioners who have written casebooks and articles on land use and environmental law, served in federal, state, and local administrations or national bar and planning association committees, or prepared national treatises on the subject.

Constituents of Matter

Atoms, Molecules, Nuclei, and Particles

CRC Press Originally published as part of the renowned Bergmann-Schaefer textbook series on experimental physics, this volume fills an important void by providing a thorough treatment of the basic: atoms, molecules, nuclei, and particles. Written by experimentalists, it forms a unique compendium of our practical knowledge of the basic elements. While keeping all of the rigor necessary for a clean treatment, the authors go beyond theory and describe major experimental results that give readers a clear view of the practical side of nature.

Secret Intelligence

A Reader

Routledge This Reader in the field of intelligence studies focuses on policy, blending classic works on concepts and approaches with more recent essays dealing with current issues and the ongoing debate about the future of intelligence. The subject of secret intelligence has never enjoyed a higher profile. The terrorist attacks of 9/11, Madrid and London, the conflicts in Iraq and Afghanistan, the missing WMD, public debates over prisoner interrogation, and new domestic security regulations have all contributed to make this a 'hot' subject over the past decade. Aiming to be more comprehensive than existing books, and to achieve truly international coverage of the field, this book provides key readings and supporting material for students and course convenors. It is divided into four main sections, each of which includes full summaries of each article, further reading suggestions, and student questions: The intelligence cycle Intelligence, counter-terrorism and security Ethics, accountability and control Intelligence and the new warfare Comprising essays by leading scholars in the field, Secret Intelligence will be essential reading both for students and for anyone wishing to understand the current relationship between intelligence and policy-making.

Modelling Water Flow in Unsaturated Porous Media

Accounting for Nonlinear Permeability and Material Heterogeneity

Springer Science & Business Media The book focuses on two issues related to mathematical and numerical modelling of flow in unsaturated porous media. In the first part numerical solution of the governing equations is discussed, with particular emphasis on the spatial discretization of highly nonlinear permeability coefficient. The second part deals with large scale flow in heterogeneous porous media of binary structure. Upscaled models are developed and it is shown that the presence of material heterogeneities may give rise to additional non-equilibrium terms in the governing equations or to hysteresis in the averaged constitutive relationships.

Artificial Life VI

Proceedings of the Sixth International Conference on Artificial Life

MIT Press The term "artificial life" describes research into synthetic systems that possess some of the essential properties of life. This interdisciplinary text includes looking at the field in an attempt to understand high-level behaviour from low-level rules.
