---

### **THE NATURE OF HEALTH**

---

---

#### **HOW AMERICA LOST, AND CAN REGAIN, A BASIC HUMAN VALUE**

---

**CRC Press This pioneering work addresses a key issue that confronts all industrialised nations: How do we organise healthcare services in accordance with fundamental human rights, whilst competing with scientific and technological advances, powerful commercial interests and widespread public ignorance? "The Nature of Health" presents a coherent, affordable and logical way to build a healthcare system. It argues against a health system fixated on the pursuit of longevity and suggests an alternative where the ability of an individual to function in worthwhile relationships is a better, more human goal. By reviewing the etymology, sociology and anthropology of health, this controversial guide examines the meaning of health, and proves how a community-centred healthcare system improves local economy, creates social capital and is affordable, rational, personal, and just. "This is badly needed nourishment for a medical system glutted on technology, individualism, profit and the pursuit of longevity. Read and be fed." - Christopher Koller, Health Insurance Commissioner, The State of Rhode Island, USA. "Unique. Surprising. A real eye-opener. Just about everyone who doesn't have a vested financial interest in maintaining the status quo will agree that U.S. healthcare is badly broken. [This book] is making it possible for us to refocus from how to provide healthcare to how to achieve health. Their description of health as successful functioning in community, rather than as a measure of longevity is a definition that can make a reader feel healthier as they take gradually appreciate the power of the concept. On this foundation, it is not as hard as one might think to outline a healthcare system that is equitable, affordable and achievable." - Alexander Blount EDD, Professor of Family Medicine, University of Massachusetts Medical Center.**

## **REBELS WITH INSUFFICIENT CAUSE**

---

---

### **AMERICANS OF AFRICAN DESCENT, THE VICTIM MENTALITY, AND VALUE FORMATION THROUGH THE FAMILY**

---

**Wipf and Stock Publishers Why are Americans of African descent, as a group, not flourishing like other racial groups in America? Dr. J. M. Sparrow, in Rebels with Insufficient Cause, proposes that value formation through the biblical model of the family is lacking. The secular world is redefining and reinterpreting the social structures that God created in order for humans to enjoy maximum human flourishing. Every person or social group that chooses to ignore God's designs for humanity will experience chaos, but every person and social group that submits to God's designs for humanity will experience order. Americans of African descent are experiencing that chaos in greater measure than any other racial group. Since this book holds to a biblical worldview that teaches that all humans are created equal, Americans of African descent are not inherently more debased than other races. However, since the out-of-wedlock birth rate is astronomically higher in black communities than in others, they are experiencing a greater share of the chaos. Yet all is not lost. When Americans of African descent begin to hold up the truths of the Bible as normative and encourage future generations to practice the same, things will begin to turn around. Americans of African descent must choose to reject the victim mentality, see themselves as part of the larger American culture rather than as outsiders, and inculcate biblical values on their children in the midst of loving, supportive, and God-honoring family units.**

**SCIENTIFIC PHILOSOPHY**

---

Springer This textbook presents the basics of philosophy that are necessary for the student and researcher in science in order to better understand scientific work. The approach is not historical but formative: tools for semantical analysis, ontology of science, epistemology, and scientific ethics are presented in a formal and direct way. The book has two parts: one with the general theory and a second part with application to some problems such as the interpretation of quantum mechanics, the nature of mathematics, and the ontology of spacetime. The book addresses questions such as "What is meaning?", "What is truth?", "What are truth criteria in science?", "What is a theory?", "What is a model?" "What is a datum?", "What is information?", "What does it mean to understand something?", "What is space?", "What is time?", "How are these concepts articulated in science?" "What are values?" "What are the limits of science?", and many more. The philosophical views presented are "scientific" in the sense that they are informed by current science, they are relevant for scientific research, and the method adopted uses the hypothetical-deductive approach that is characteristic of science. The results and conclusions, as any scientific conclusion, are open to revision in the light of future advances. Hence, this philosophical approach opposes to dogmatic philosophy. Supported by end-of-chapter summaries and a list of special symbols used, the material will be of interest for students and researchers in both science and philosophy. The second part will appeal to physicists and mathematicians.

## CRITICAL EXERCISES IN RECOLLECTION

---

SUNY Press This book sets forth an ontological Copernican revolution. By means of a critical phenomenology, it shifts the axis of reflection from the putatively bedrock dualisms in which philosophy was conceived, to our lively, intentional mindbodies that are ontologically antecedent to, beyond the grasp of, yet implicated in, all reflection. In these exercises, reflection's center of gravity is shifted to our mindbodies, whose meditated whatness can be known in all of its forms of appearance—as material objects, organisms, makers, keepers and breakers of promises, husbands and wives, et cetera—and whose unmediated thisness everywhere importunately shows itself. From this seamless, ontological bedrock, all of our dualisms have been brought forth by reflection. They never cease to be founded there; in action they disappear there. How, on this new foundation, do reflection, interpretation, thinking, speaking, time, hope, and memory come differently to do their work?

## JEWISH THEOLOGICAL RESPONSES DURING AND AFTER THE HOLOCAUST

---

Oxford University Press This volume presents a wide-ranging selection of Jewish theological responses to the Holocaust. It will be the most complete anthology of its sort, bringing together for the first time: (1) a large sample of ultra-orthodox writings, translated from the Hebrew and Yiddish; (2) a substantial selection of essays by Israeli authors, also translated from the Hebrew; (3) a broad sampling of works written in English by American and European authors. These diverse selections represent virtually every significant theological position that has been articulated by a Jewish thinker in response to the Holocaust. Included are rarely studied responses that were written while the Holocaust was happening.

**CULTURE AND HUMAN-ROBOT INTERACTION IN MILITARIZED SPACES**

---

**A WAR STORY**

---

Ashgate Publishing, Ltd. Explosive Ordnance Disposal (EOD) personnel are some of the most highly trained people in the military, with a job description that spans defusing unexploded ordnance to protecting VIP's and state dignitaries. EOD are also one of the first military groups to work with robots every day. These robots have become an increasingly important tool in EOD work, enabling people to work at safer distances in many dangerous situations. Based on exploratory research investigating interactions between EOD personnel and the robots they use, this study richly describes the nuances of these reciprocal influences, especially those related to operator emotion associated with the robots. In particular, this book examines the activities, processes and contexts that influence or constrain everyday EOD human-robot interactions, what human factors are shaping the (robotic) technology and how people and culture are being changed by using it. The findings from this research have implications for future personnel training, and the refinement of robot design considerations for many fields that rely on critical small group communication and decision-making skills.

**INTEGRATING ACTION, DISCOURSE, AND ARGUMENT**

---

Lexington Books This book treats practical and political reasoning as an active engagement with the world and other people; it cannot be understood as exclusively cognitive and this is seen as a virtue rather than a deficiency. Informal, emotional, characterological, aesthetic and interactional aspects of thought can be constituents of reasonable arguing. The work examines key capacities connected with argumentation, in a variety of fields from professional and medical ethics to work organization and the practice of art.

**THE TRANSHUMANISM HANDBOOK**

---

---

Springer Modern humanity with some 5,000 years of recorded history has been experiencing growing pains, with no end in sight. It is high time for humanity to grow up and to transcend itself by embracing transhumanism. Transhumanism offers the most inclusive ideology for all ethnicities and races, the religious and the atheists, conservatives and liberals, the young and the old regardless of socioeconomic status, gender identity, or any other individual qualities. This book expounds on contemporary views and practical advice from more than 70 transhumanists. Astronaut Neil Armstrong said on the Apollo 11 moon landing in 1969, "One small step for a man, one giant leap for mankind." Transhumanism is the next logical step in the evolution of humankind, and it is the existential solution to the long-term survival of the human race.

#### **DESCRIPTIONS**

---

SUNY Press Phenomenology in America has developed in unique directions with respect to descriptive analysis and in relation to interdisciplinary fields. Descriptions examines current trends in phenomenology. It begins by reflecting on phenomenological description itself, then takes phenomenology into such areas as time, science and the arts, the social, and into the universities. Ranging from the development of theory by such well-known philosophers as Maurice Natanson and Robert Sokolowski, this collection addresses the topics of pregnant subjectivity, nostalgia, the ethical function of architecture, computer science, and academic freedom.

---

### **ENVIRONMENT-CULTURAL INTERACTION AND THE TRIBES OF NORTH-EAST INDIA**

---

Cambridge Scholars Publishing All life forms on earth are complementary to each other; the existence and survival of one depend on the existence of another, and vice versa. However, no life forms are more dependent on others than human beings. Humans' very survival is conditioned by the existence of the natural environment and the living things within it. One aspect of this interaction is the central and inescapable role played by human culture in defining the human-nature relationship. This book emphasises that environmental conservation is a matter of moral and cultural ethics. It stresses the fact that existing environmental conservation methods need to accommodate traditional environmental knowledge and practices of different indigenous cultures in order to re-build and restore the bond between humans and nature.
