World Development Report 2009

Reshaping Economic Geography

World Bank Publications Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

Loss and Damage from Climate Change

Concepts, Methods and Policy Options

Springer This book provides an authoritative insight on the Loss and Damage discourse by highlighting state-of-the-art research and policy linked to this discourse and articulating its multiple concepts, principles and methods. Written by leading researchers and practitioners, it identifies practical and evidence-based policy options to inform the discourse and climate negotiations. With climate-related risks on the rise and impacts being felt around the globe has come the recognition that climate mitigation and adaptation may not be enough to manage the effects from anthropogenic climate change. This recognition led to the creation of the Warsaw International Mechanism on Loss and Damage in 2013, a climate policy mechanism dedicated to dealing with climate-related effects in highly vulnerable countries that face severe constraints and limits to adaptation. Endorsed in 2015 by the Paris Agreement and effectively considered a third pillar of international climate policy, debate and research on Loss and Damage continues to gain enormous traction. Yet, concepts, methods and tools as well as directions for policy and implementation have remained contested and vague. Suitable for researchers, policy-advisors, practitioners and the interested public, the book furthermore: • discusses the political, legal, economic and institutional dimensions of the issue • highlights normative questions central to the discourse • provides a focus on climate risks and climate risk management. • presents salient case studies from around the world.

Expanding Underrepresented Minority Participation America's Science and Technology Talent at the Crossroads

National Academies Press In order for the United States to maintain the global leadership and competitiveness in science and technology that are critical to achieving national goals, we must invest in research, encourage innovation, and grow a strong and talented science and technology workforce. Expanding Underrepresented Minority Participation explores the role of diversity in the science, technology, engineering and mathematics (STEM) workforce and its value in keeping America innovative and competitive. According to the book, the U.S. labor market is projected to grow faster in science and engineering than in any other sector in the coming years, making minority participation in STEM education at all levels a national priority. Expanding Underrepresented Minority Participation analyzes the rate of change and the challenges the nation currently faces in developing a strong and diverse workforce. Although minorities are the fastest growing segment of the population, they are underrepresented in the fields of science and engineering. Historically, there has been a strong connection between increasing educational attainment in the United States and the growth in and global leadership of the economy. Expanding Underrepresented Minority Participation suggests that the federal government, industry, and post-secondary institutions work collaboratively with K-12 schools and school systems to increase minority access to and demand for post-secondary STEM education and technical training. The book also identifies best practices and offers a comprehensive road map for increasing involvement of underrepresented minorities and improving the quality of their education. It offers recommendations that focus on academic and social support, institutional roles, teacher preparation, affordability and program development.

Targeting Immigrants

Government, Technology, and Ethics

John Wiley & Sons This book is concerned with the government of "illegal" immigration since the passage of the U.S. Immigration Act of 1965, exploring how certain mentalities and intellectual machineries have rendered illegal immigrants as targets of government. Examines how various authorities have created knowledge about and constructed "illegal" immigration as an ethical problem. Analyzes the tactics that have been deployed to govern immigration, particularly at the US-Mexico border. Using an ethnographic approach, draws on primary source materials - including government publications, archival documents, newspapers, and popular magazines. Studies measures (e.g. Operation Gatekeeper and Operation Hold-the-Line) for reforming the conduct of "illegal" immigrants in order to forestall illicit border crossings. Frames the study of immigration within Foucauldian theories of governmentality. Highlights the role of numbers and statistics in constructing the "illegal" immigrant.

The New Zealand Official Year-book

Sustaining Global Surveillance and Response to Emerging Zoonotic Diseases

National Academies Press H1N1 ("swine flu"), SARS, mad cow disease, and HIV/AIDS are a few examples of zoonotic diseases--diseases transmitted between humans and animals. Zoonotic diseases are a growing concern given multiple factors: their often novel and unpredictable nature, their ability to emerge anywhere and spread rapidly around the globe, and their major economic toll on several disparate industries. Infectious disease surveillance systems are used to detect this threat to human and animal health. By systematically collecting data on the occurrence of infectious diseases in humans and animals, investigators can track the spread of disease and provide an early warning to human and animal health officials, nationally and internationally, for follow-up and response. Unfortunately, and for many reasons, current disease surveillance has been ineffective or untimely in alerting officials to emerging zoonotic diseases. Sustaining Global Surveillance and Response to Emerging Zoonotic Diseases assesses some of the disease surveillance systems around the world, and recommends ways to improve early detection and response. The book presents solutions for improved coordination between human and animal health sectors, and among governments and international organizations. Parties seeking to improve the detection and response to zoonotic diseases--including U.S. government and international health policy makers, researchers, epidemiologists, human health clinicians, and veterinarians--can use this book to help curtail the threat zoonotic diseases pose to economies, societies, and health.

Critical Pedagogy and the Everyday Classroom

Springer Science & Business Media Critical Pedagogy addresses the shortcomings of mainstream educational theory and practice and promotes the humanization of teacher and student. Where Critical Pedagogy is often treated as a discourse of academics in universities, this book explores the applications of Critical Pedagogy to actual classroom situations. Written in a straight-forward, concise, and lucid form by an American high school teacher, drawing examples from literature, film, and, above all, the everyday classroom, this book is meant to provoke thought in teachers, students and education activists as we transform our classrooms into democratic sites. From grading to testing, from content area disciplines to curriculum planning and instruction, from the social

construction of knowledge to embodied cognition, this book takes the theories behind Critical Pedagogy and illustrates them at work in common classroom environments.

Twenty-First Century Gateways

Immigrant Incorporation in Suburban America

Brookings Institution Press While federal action on immigration faces an uncertain future, states, cities and suburban municipalities craft their own responses to immigration. *Twenty-First-Century Gateways*, focuses on the fastest-growing immigrant populations in metropolitan areas with previously low levels of immigration—places such as Atlanta, Austin, Charlotte, Dallas-Fort Worth, Minneapolis-St. Paul, Phoenix, Portland, Sacramento, and Washington, D.C. These places are typical of the newest, largest immigrant gateways to America, characterized by post-WWII growth, recent burgeoning immigrant populations, and predominantly suburban settlement. More immigrants, both legal and undocumented, arrived in the United States during the 1990s than in any other decade on record. That growth has continued more slowly since the Great Recession; nonetheless the U.S. immigrant population has doubled since 1990. Many immigrants continued to move into traditional urban centers such as New York, Chicago, and Los Angeles, but burgeoning numbers were attracted by the economic and housing opportunities of fast-growing metropolitan areas and their largely suburban settings. The pace of change in this new geography of immigration has presented many local areas with challenges—social, fiscal, and political. Edited by Audrey Singer, Susan W. Hardwick, and Caroline B. Brettell, *Twenty-First-Century Gateways* provides in-depth, comparative analysis of immigration trends and local policy responses in America's newest gateways. The case examples by a group of leading multidisciplinary immigration scholars explore the challenges of integrating newcomers in the specific gateways, as well as their impact on suburban infrastructure such as housing, transportation, schools, health care, economic development, and public safety. The changes and trends dissected in this book present a critically important understanding of the reshaping of the United States today and the future impact of immigration, vital as the nation and metropolitan areas face changes to immigration policy.

A Survey of Race Relations in South Africa

Occult Cosmology

I am a teacher, sometimes known as the Tibetan, who is attempting to convey to a group within humanity a body of teachings which will help them take the next evolutionary step forward. This third phase of these esoteric teachings which I have responsibility for disseminating to the Western mind is necessary if they are to achieve their overall purpose, and it is with this purpose that I am primarily concerned. Let me state it plainly. The purpose of these teachings is to achieve liberation from the three worlds for those souls who come in contact with them. The teachings are NOT designed to build a body of knowledge upon the mental plane. The development and training of the mind is a prerequisite for liberation and not an end in itself. The mind must be reoriented so that it is able to penetrate equally into the inner and outer realities, but it is not the mind to which these teachings are ultimately aimed. It is to the soul-the dweller in the mind, the director of experience-that we address ourselves. Just as the causal body is a temporary abode for the soul and a means by which it can complete its redemptive mission in the three worlds, just so these esoteric teachings form a causal vehicle within the higher mental plane of humanity. The current teachings form the third or inner petals in its threefold expression. The causal body, when complete, is not preserved in perpetuity like some frozen museum exhibit. It is the fruit of a process and this fruit serves a purpose in its ripening, but the ripe fruit does not linger long-it is destroyed, and in this destruction another pathway is opened in the planetary web.

Arab Integration

A 21st Century Development Imperative

United Nations Development program This report aims to revive the project of Arab integration conferring new dimensions to the concept of integration to include all aspects of the social structure or the elements of human civilization. It also calls for expanding economic integration beyond the narrow scope of trade liberalisation to laying out the foundations for production and diversification, and building knowledge-based economies through cooperation in the development of integrated human, technological and productive capacities in the Arab region. Using the best available scientific methods, this report presents standard quantitative estimates of the consequences of keeping current modalities of integration, which are limited to trade liberalization and the establishment of an Arab customs union. Simulations of proposed scenarios for strengthening economic integration were also made and the results compared with the estimated consequences of the status quo.

EHealth

Combining Health Telematics, Telemedicine, Biomedical Engineering, and Bioinformatics to the Edge : Global Experts Summit Textbook

IOS Press Current demographic, economic and social conditions which developed countries are faced with require a paradigm change for delivering high quality and efficient health services. In that context, healthcare systems have to turn from organization-centred to process-oriented and finally towards individualised patient care, also called personal care, based on eHealth platform services. Interoperability requirements for ubiquitous personalised health services reach beyond current concepts of health information integration among professional stakeholders and related Electronic Patient Records. Future personal health platforms have particularly to maintain semantic interoperability among systems using different modalities and technologies, different knowledge representation and domain experts' languages as well as different coding schemes and terminologies to include home care as well as personal and mobile systems. This development is not restricted to regions or countries, but appears globally, requiring a comprehensive international collaboration. This publication within the Series "Studies in Health Technology and Informatics" at IOS Press presents papers from internationally leading experts representing all domains involved in eHealth.
